

National Severe Weather Warning Service

Chief Forecasters Assessment

A cold air mass will follow Wednesday's depression with wintry showers, most frequent in the NW, also expected to affect parts of Scotland. Some sleet and wet snow is expected to fall to low levels, with some settling above about 150 to 200 m. This, combined with run off from fields, will lead to some icy patches developing overnight.

The Met Office have issued a **Yellow Warning of Ice**

Valid from **18:00 on Wed, 27th Jan 2016** until **09:00 on Thu, 28th Jan 2016**

Scattered, wintry showers are expected across Scotland this evening and overnight, and with road temperatures often falling below freezing there is the risk of some icy patches developing. These showers will also bring some snow accumulations above 150-200m, with some temporary wet snow to lower levels.

Please be aware of the risk of some difficult driving conditions and localised disruption to travel.
